SUMMARY

Recent Computer Science graduate with strong Python programming skills and hands-on experience building backend systems, REST APIs, and automation pipelines. Solid foundation in Operating Systems, Data Structures, and Computer Networks with practical Linux experience. Proven ability to debug performance bottlenecks, reduce latency, and deliver production-ready software. Eager to contribute to Riverbed's Acceleration team and grow toward a full-time Software Engineer role.

TECHNICAL SKILLS

Languages:	Python, Java, C, JavaScript, TypeScript, SQL
Core CS:	Data Structures & Algorithms, Operating Systems, Computer Networks, OOP
Backend:	REST APIs, Flask, Node.js, System Design, MongoDB
Networking:	TCP/IP, HTTP/HTTPS, Socket Programming fundamentals
Tools:	Linux (CLI), Git, Docker, Postman
Debugging:	API optimization, latency profiling, pipeline debugging, code modularization

WORK EXPERIENCE

Artificial Intelligence Intern — Student Tribe

Feb 2026 – Mar 2026

- Built and optimized a Python backend Q&A system processing 200+ documents with efficient retrieval pipelines
- Reduced response latency by ~35% through data processing optimization and retrieval workflow improvements
- Debugged pipeline inefficiencies via iterative profiling and testing, improving overall system throughput
- Deployed and monitored a production-ready Streamlit application serving 50+ active users

Python Development Intern — Infotact

Dec 2024 – Feb 2025

- Developed Python automation scripts eliminating 8+ hours of weekly manual work across multiple workflows
- Built 6 RESTful APIs using Flask, improving data transfer efficiency by ~20% via optimized serialization
- Refactored a 3,000-line legacy codebase into modular components, improving maintainability and testability
- Identified and resolved API response bottlenecks, significantly improving request handling throughput

PROJECTS

Online Test Platform | Python · Flask · MongoDB · React

- Built a scalable full-stack platform supporting 200+ concurrent users with stable uptime and session management
- Reduced response latency by 40% through database indexing, connection pooling, and API-level caching
- Implemented real-time monitoring and debugging mechanisms for reliable user session tracking

Book-to-Video AI Generator | Python · REST APIs · Backend Pipeline

- Designed a multi-stage Python backend pipeline for large-scale document ingestion and media generation
- Built REST APIs for efficient request queuing, response handling, and error recovery across pipeline stages
- Improved end-to-end processing reliability through structured exception handling and retry mechanisms

Fertilizer Recommender System | Python · Machine Learning · Flask

- Built a machine learning classification system achieving 91% accuracy on structured agricultural datasets
- Deployed a Flask-based REST API with sub-200ms response time, optimized for edge-case predictions
- Applied feature engineering and hyperparameter tuning to improve model performance and generalization

EDUCATION

B.E. / B.Tech — Computer Science & Engineering

Hyderabad, India

Graduated 2025

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems

ACHIEVEMENTS

- 1st Place — HackArena Hackathon, GNIT University (2024)
- 2nd Place — Anviya Hackathon (2025)
- 3rd Place — VisAI Hackathon (2025)

ADDITIONAL

Familiar with networking fundamentals including TCP/IP stack and HTTP protocol internals. Comfortable in Linux-based environments (CLI, file system, process management). Strong analytical and debugging skills demonstrated across multiple production deployments. Collaborative team player with cross-functional engineering experience.
